

Visual Testing Applications

Field Service

Whether you're checking a Victorian brick pipe hundreds of metres away or the structural integrity of a suspension bridge Visual Testing Services have a range of compact, portable, rugged inspection systems to access even the hardest to reach areas.

Qualified technicians provide expert advice on the interpretation of abnormalities in cavity walls, ceiling and floor voids, using the latest developments in cctv cameras to display and record unbeatable quality images for professional reports.

Severe damage to concrete pipe

Holed airshaft

Partially blocked drain

Debris build up

Root growth
